## WYMIAR TECHNICZNY

---

A light wood-colored Lamelli will become an amazing wall decoration of any interior, giving it a unique character. Our product is made of PolyForce material, characterized by high resistance to moisture, so it can be used in bathrooms, as well as in all rooms exposed to constant contact with water. The panel was made using the innovative ScratchShield technology, which ensures maximum surface hardening and protection against damage. The well-thought-out length of 270 cm makes the installation very simple - it takes place in one piece without the need to connect smaller elements to maintain the continuity of the pattern.

Easy, quick and clean installation using **Mardom FixPro** or **Mardom Max adhesive**.

Possibility to finish panels with dedicated ends - **left** and **right**.

The product is entirely made in Poland.

Length: 270 cm

Width: 12 cm

Depth: 1.2 cm
